

**CLEAN COPY OF SPECIFICATION**

*A1*

In a preferred embodiment of the present invention, an adjustable spacer is located between the optical plates 201 and 202. The selected adjustable spacer medium adjusts the spacing between optical plates 201 and 202 while maintaining their parallel relationship with each other. Accordingly, one preferred choice for the adjustable spacer is a conventional high-accuracy piezo-ceramic actuator. As known in the art, the piezo-ceramic actuator typically comprises ceramics 226 and 227, electrodes 228 and 229 connected to a terminal 230, and electrode 231 connected to a terminal 232. A control voltage, such as a piezo-electric control voltage UPE, is applied to and between the terminals 230 and 232, in order to adjust the spacing  $d$  between the reflective layers 203 and 204 and by consequence the EOPD.
